Date of Birth: Jan 11<sup>th</sup>, 1997  
*Updated on Dec 19<sup>th</sup>, 2022*

## RESEARCH FOCUS

---

I am passionate about using advanced computational methods to deconvolute complex biological data. My research focuses on developing probabilistic models to analyze temporal perturbation patterns in single-cell experiments and user-friendly frameworks for disentangling multiplexed gene signatures in single-cell data. I have also worked on single-cell analysis in various tissues, including cancer, lung, immune systems, and brain organoids. My goal is to improve our understanding of emerging spatial transcriptomics and multi-omics data through the creation of innovative computational approaches.

## EDUCATION

---

Cincinnati Children's Hospital, Cincinnati, USA	<b>Ph.D. in Biomedical Informatics</b>	2018-2023 (Expected)
Zhejiang University, Hangzhou, China	<b>B.Sc. in Biology</b>	2014-2018

## RESEARCH EXPERIENCE

---

**Massachusetts General Hospital, Harvard Medical School** 2022/05-Present

Visiting student in Dr. Jian Shu's lab

- Developed deep learning-based methods to improve subcellular analysis in spatial transcriptomics data
- Designed transcriptomics probes for in situ sequencing technologies.

**Department of Biomedical Informatics, Cincinnati Children's Hospital** 2018/09-Present

Ph.D. student in Dr. Bruce Aronow's lab

- Developed CellDrift, a generalized linear model to analyze single cell perturbation effects. Applied functional data analysis (FDA) to infer temporal perturbational patterns.
- Interrogated temporal impact of NRXN1 deletion in schizophrenia patients using single-cell data from patient-derived brain organoids.
- Analyzed single cell data of human hepatoblastoma and mouse xenograft tumors. Identified tumor clusters with distinct transcriptional profiles.
- Developed ToppCell, a hierarchical differential analysis framework for single cell datasets with complex metadata. Constructed gene signature atlases for COVID-19 patients and multiple human tissues, including lung, brain, GI, and others.

**Institute of Pharmaceutical Biotechnology, Zhejiang University** 2016/11-2018/07

Undergraduate Student in Dr. Xin Chen's lab

- Benchmarked Gene Set Linkage Analysis (GSLA), a gene set annotation tool in Arabidopsis.
- Participated in the design of decision support system for cancer patients based on gene mutations and transcriptional levels.

**Department of Life Science, Zhejiang University** 2015/07-2016/10

Undergraduate Student in Dr. Jun Chen's lab

- Selected scoliosis zebrafishes with genetic mutations. Used CRISPR technology in zebrafishes with double gRNAs to knock in long DNA fragments with higher precision and specificity.

## SKILLS

---

**Programming:** Python, PyTorch, Pyro, R, Linux shell

**Skills:** Deep learning, Probabilistic modeling, Single-cell analysis, Cloud computing

## AWARDS

---

Second Place, Best Poster Award, ISMB 2022 (SysMod Meeting)	2022
Second Place, Graduate Student Research Forum (GSRF), University of Cincinnati,	2020
Best Application Award, Zhejiang Bioinformatics Competition	2017
China National Award (1.8%)	2017
First Prize Scholarship for Excellent Students, Zhejiang University	2017
Tang Lixin Scholarship for Excellent Model Student	2017
Zhejiang Provincial Government Scholarship	2016
Second Prize, Physics Innovation Competition in Zhejiang Province	2015

## PUBLICATIONS

---
